MEMORANDUM

To: Joseph Martella, RIDEM

From: Dave Rusczyk, GZA

Cc: Kenneth Lento, Rhode Island Energy

Date: August 23, 2022

Re: Site Response Action Report
Period July 24, 2022 through August 6, 2022
Former Tidewater Facility
Pawtucket, Rhode Island
RIDEM Case No. 95-022 / Site Remediation File No. SR-26-0934

SITE ACTIVITIES PERFORMED

- Charter Contracting Company, LLC (Charter) continued activities related to implementation of the remedial construction work. These activities included:
 - Completion of the installation of the engineered cap within the sand filter on the east side of the stadium field.
 - Completion of the topsoil engineered cap between the east side of the porous pavement maintenance path and the top of the revetment cap. We note, the buffer plantings will be installed in September 2022.
 - Continued regrading of the ground surface south of the proposed stadium in preparation for installation of the engineered cap.
- Perimeter air monitoring was performed during the period covered by this report with 9 air monitoring stations (4 solar powered units located proximate to the river and 5 electrically powered units). The stations measured and recorded respirable dust and total volatile organic compounds (TVOC) concentrations continuously 24 hours per day/7 days per week with the following exceptions:
 - Intermittent communication errors were encountered between Station 3 and the control system between July 25 and 26, 2022 and between July 28 and 30, 2022. These communication errors were resolved on July 30, 2022.

As indicated in the attached weekly perimeter air monitoring graphs, no exceedances of the total volatile organic compound (0.5 ppmv) and respirable dust (150 $\mu\text{g}/\text{m}^3$) perimeter threshold levels were observed during the monitoring period covered by this report with the exception of the following:

- Elevated respirable dust levels above the 15-minute sustained perimeter threshold level were observed at Station 7 on July 24, 2022 at 9:50 am. Elevated respirable dust levels were observed at several stations during the same timeframe and the elevated respirable dust levels were attributed to the dry weather conditions. We also note that the majority of the Site is capped with clean imported materials with exception of the areas in the proposed parking lot area south of the proposed stadium.

- Elevated total volatile organic compound (TVOC) concentrations were observed at Station 10 on August 2, 2022 associated with the combined sewer outfall (CSO) work being completed by the Narragansett Bay Commission (NBC) on the Tidewater Site. TVOC levels decreased to background levels prior to the need to implement engineered controls or modifying their work procedures.
- Elevated TVOC concentrations were again observed at Station 10 on August 3, 2022 associated with NBC's CSO work being completed on the Tidewater Site. GZA notified NBC's contractor of the elevated TVOC levels and their contractor modified their work procedures to address air monitoring issue. After modifying their work procedures, TVOC levels decreased to below the 15-minute sustained perimeter threshold level.
- GZA collected ambient air samples from upwind and downwind locations on July 28, 2022 and August 4, 2022 for laboratory analysis for benzene, toluene, ethylbenzene, xylenes, and naphthalene. The analytical results from these samples indicated there were no exceedances of the project action levels. The analytical results were posted to the project website and the bulletin boards at the ends of Tidewater Street and Bowles Court and are also attached to this report.

ANTICIPATED SITE ACTIVITIES TO BE PERFORMED WITHIN NEXT 2 WEEKS

- Continued regrading south of the proposed stadium to the subgrade elevations for the engineered cap.
- Completion of the installation of the engineered cap in the western portion of the Site.
- Completion of the engineered cap directly east of the substation as the substation upgrades are completed.

Please contact Kenneth Lento at 781-907-3655 if you have any questions or comments.

Project Action Levels	6.2	80	230	23	20

Notes:

1. The Project Action Levels are consistent with the Air Quality Monitoring Plan developed for the Site.
2. Air samples are collected in stainless steel summa canisters over an approximately 8-hour period.
3. Air samples are analyzed by EuroFins TestAmerica of Burlington, VT.
4. Results and action levels are listed in parts per billion volume/volume (ppb v/v).
5. An upstream ambient air sample was not collected on March 18, 2021 due to a problem with the sampling equipment.
